TECHNICAL SKILLS

- **Programming Languages**
Python · Java · JavaScript
- **Front-End Development**
React.js · HTML5 · CSS3
- **Back-End Development**
Flask · Node.js
- **Databases**
MySQL · Firebase
- **Design Tools**
Adobe Photoshop · Figma · Canva
- **Development Tools**
Cit · GitHub · VS Code

ABOUT ME

Final year Software Engineering undergraduate with experience in full-stack web development, artificial intelligence, and graphic design. Proficient in React, Flask, JavaScript, and Python, with hands-on experience developing AI-powered applications. Passionate about creating innovative, user-focused solutions by combining technical expertise with creative design. Seeking a Software Engineer opportunity to contribute, learn, and grow in a collaborative environment.

PROJECTS

ChagasPrognosis AI

Python, PyTorch, LightGBM, React.js, Flask, JavaScript, CSS3, Pandas, NumPy

Developed a full-stack AI-powered clinical decision support system that predicts the risk of Chronic Chagas Cardiomyopathy using a multi-modal approach. The application combines deep learning analysis of 12-lead ECG signals with patient clinical data to generate an interpretable risk score, enabling healthcare professionals to identify high-risk patients for early intervention.

Rescue-Radar

React native, Firebase, Google Maps API

Disaster reporting mobile application is being developed that allows users to take photos of potential threats or risky areas in a specific location. The photos are then sent to the community, and the uploader can tag the location via Google Maps. Users in the potentially risky area are alerted via notifications, while authorities are automatically informed

Personal Portfolio Website

React.js, JavaScript, HTML5, CSS3, React Router

Designed and developed a responsive portfolio website to showcase software engineering projects, technical skills, graphic design work, and professional achievements. The website features a modern user interface, responsive design, and intuitive navigation for an engaging user experience.

APL Auction Management System

React.js, JavaScript, HTML5, CSS3, React Router

Designed and developed a React-based web application to facilitate a live sports player auction. The system features real-time budget tracking, dynamic validation for squad limits and foreign player quotas, and an unsold player recovery pool. Utilized standard CSS for a responsive, high-contrast UI and integrated jsPDF to generate dynamically styled, team-specific PDF roster exports on demand

EDUCATION

BEng (Hons) Software Engineering

Informatics Institute of Technology (IIT), Sri Lanka
Affiliated with the University of Westminster

2023 – 2026

G.C.E. Advanced Level (Mathematics Stream)

Vijayaba National School, Maho

2022
